

Enfinity Solar Italy Portfolio - Information Memorandum (Extract)

Section 4 - Portfolio Overview. The subject portfolio comprises eight (8) greenfield solar photovoltaic plants aggregating to 276 MWdc of installed capacity across five Italian regions (Puglia, Sicilia, Lazio, Basilicata, Sardegna).

Section 7 - Revenue Assumptions. Blended weighted-average PPA + FER X tariff is projected at EUR 75/MWh for 2026 vintage awards, in line with the GSE FER X auction results published 15 February 2026. Annual revenue indexation is modeled at 1.5 percent, reflecting partial CPI linkage of FER X tariffs.

Section 9 - Operating Costs. Steady-state O&M, land lease, insurance and grid fees aggregate to approximately 22 percent of revenue. Fixed cost inflation is set at 2.0 percent per annum. A Maintenance & Major Repairs Account (MMRA) is funded at 2.0 percent of annual revenues.

Section 11 - Capex Phasing. Total project capex of EUR 316 million is phased 35 percent in Year 1 (site preparation, module procurement, long-lead equipment) and 65 percent in Year 2 (installation, grid connection, commissioning, commercial operation date).

Section 15 - Corporate Tax. Effective tax rate applied to operating profit is 27.9 percent (IRES 24.0 percent + IRAP 3.9 percent) per PwC Italy tax summary.
