

Enfinity Global secures EUR 316M to finance 276 MW of solar projects in Italy

PR Newswire, 15 August 2025. Enfinity Global today announced the closing of a EUR 316 million financing package for 276 MW of utility-scale solar photovoltaic projects across Italy. The non-recourse senior green loan of EUR 214 million was arranged as a club deal with ING, Rabobank, and BNP Paribas, alongside EUR 101 million of VAT, PPA and decommissioning facilities.

The portfolio comprises 8 utility-scale solar plants located across southern and central Italy and is expected to reach commercial operation by late 2026. Enfinity Global serves as sponsor, with the senior green loan qualifying as Art. 9 sustainable investment under the EU Taxonomy.

Revenue will be derived from a blend of FER X regulated tariff awards and merchant Power Purchase Agreements, providing a stabilised cash flow profile over a 20-year operating period.

The senior facility has an 18-year operating-years tenor with a 1-year grace period, and is priced at 175 bps over 10-year EUR swap. A 1.25 percent arrangement fee applies.
