

Terna - Italian Solar Irradiation Benchmark 2025

Terna S.p.A., 30 January 2026. This report publishes average solar irradiation values across the Italian peninsula for grid-connected utility-scale photovoltaic systems operating during 2025, expressed in kWh/kWp/year.

Zone A (Sicilia, Puglia, Basilicata, Sardegna southern): 1,600 to 1,650 kWh/kWp/year. Zone B (Lazio, Campania, Abruzzo): 1,450 to 1,550 kWh/kWp/year. Zone C (central and northern regions): 1,250 to 1,400 kWh/kWp/year.

Blended national average for utility-scale assets across southern and central Italy is 1,550 kWh/kWp/year. Assuming a 276 MW utility-scale portfolio spread across these zones, expected gross energy yield is approximately 428 GWh per annum.
